

*Viburnum trilobum*

*Highbush Cranberry*

*Shrub*

## **HIGHBUSH CRANBERRY**

Locally frequent throughout Michigan along streams, in open or lightly shaded swamps, and wet grounds. Moderately shade tolerant. It produces handsome clusters of white flowers and scarlet fruits, which birds eat in late winter. Berries can be picked to make homemade jellies. The bush can reach a height of 10' and will spread somewhat. Excellent wildlife plant!
