

Honeycrisp Apple

Honeycrisp is the current "star" of the apple industry and with consumers. It is "explosively crisp" with an unbeatable sweet, juicy flavor. It is naturally large and will color well in cooler climates. Color can range from brilliant red with some striping to mostly red-striped over a straw yellow background color when ready to pick. Very hardy and productive. Keeps well when picked in peak condition. If you like crisp and juicy apples, this one is unbeatable. Harvest early in fall in mid-September.
