

*Picea abies*

*Norway Spruce*

*Coniferous tree*

## **NORWAY SPRUCE**

Imported from Europe, Norway Spruce can attain heights of 60' to 90' with a trunk 1' to 3' in diameter. Branches are covered with short 1" to 2" dark green needles. Preferring moist clay to loam soils, it is shade tolerant and moderately fast growing. Damage from insects and diseases can be reduced by planting on proper sites at the proper density. Most often planted for timber production, pulpwood, windbreaks, and wildlife.
