

Pinus strobus

Eastern White Pine

Coniferous tree

EASTERN WHITE PINE

This is a moderate to fast growing native pine with soft bluish-green 2" to 5" long needles. Attaining heights of 80' to 120' with a trunk 2' to 3' in diameter, it is moderately shade tolerant and prefers rich, porous, moist to well-drained sandy soil. Most often planted for timber production, borders, and wildlife habitat. The wood is generally used for construction, millwork, and pulpwood.
